**Re: Free Range Egg Definition**

**I wish to make a submission in regards to the definition of genuine free range eggs for labelling.**

**Genuine Free Range Eggs are produced from Hens that have not had any Beak treatment or wing clipped**

**The Hens are kept at a stocking density of no more than 750 hens per hectare**

**The Hens are able to roam and forage for at least 12 hours per day if they choose to do so**

**Any other methods of producing eggs outside of the above should not be able to be labelled free range or genuine free range.**

**Yours Sincerely  
Jeff Krake**
