Dear Review Panel,

I would like to direct your attention to an excellent publication "Guide to Global Hazards", subtitled: A Complete Reference Guide to the Hazards that Endanger Life on Earth.

Published 2003, A Phillips Guide (see phillips - maps.co.uk) ISBN 0-540-08388-7.

Mainly by a professor of Geophysics and a director of the Benfield Hazard Research Centre, University College London.

This has everything: Earthquakes, Volcanoes, Tsunami, Waves, Storm Surges, Coastal Erosion, Ice Hazards, Flooding, Winds, Hurricanes, Tornadoes, Storms, Rain + Hail, Lightning, Snow and Ice, Avalanches, Landslides, Desertification, Drought + Famine, Fires, Disease, Water Pollution, Ozone Depletion, Acid Rain, Land Contamination, Habitat + Species loss, Global Warming, El Nino, Meteorites + Comets, Great Extinctions, and Further Reading + Websites.

With Global warming, super volcanoes, mass population increase, desmilling arable land and food production, unpredictable weather and religious fascism I think your review should be ~~through~~ thought and on going. Best wishes,
PG
