Director
Small Business Tax Unit
Treasury
Langton Cres
Parkes ACT 2600

This proposal appears to assist in the purchase of equipment of more efficient operation and this will reduce electricity demand, and a very positive direction.
This direction is therefore supported.

No mention is made to the provision towards capital cost incentives for solar generating costs which would also assist greatly in the more efficient operation of small business. This also needs to be covered to reduce demand on the electricity generating costs for small business and complement the Governments direction to reduce demand on fossil fuel generating power stations.

If solar can also be subject to the accelerated depreciation rates mentioned then this should be included in the Governments incentive proposal.

Thank you for the time to comment on the proposal and hopefully if introduced will be another positive step in more efficiencies for less demand for power generation.

Kind Regards,

Bill Moffat
